EDUCATION

University of Missouri

Columbia, MO

B.S. Mathematics, B.S. Computer Science | GPA: 3.9/4.0 | GRE: 170Q / 165V

August 2023 – December 2027

- **Relevant Coursework:** Mathematical Statistics, Complex Analysis, Matrix Theory, Advanced Algorithms
- **Honors:** Outstanding Engineering Junior (sole CS student selected), National Merit Semifinalist

EXPERIENCE

Software Developer Intern

May 2026 – Present

Epic

Verona, WI

- Designed reusable combined OCR and barcode scanning infrastructure replacing unreliable barcode-only solutions
- Developed Android activity for automated surgical supply identification and documentation

Undergraduate Research Assistant

August 2023 – Present

University of Missouri - Advisor: Dr. Prasad Calyam

Columbia, MO

- Led development of electron microscopy web portal, designing system architecture and directing work of two M.S. students
- Co-authored paper published in IEEE Transactions on Human-Machine Systems on cloud-based research workflows
- Developed vocal fold segmentation pipeline on University HPC cluster, replacing device-dependent clinical workflows
- Developed and deployed RAG-augmented LLaMA chatbot for carbon nanotube and materials science research, integrated with cloud-based SEM workflows on AWS (EC2, S3)

NSF REU Research Assistant

May 2025 – July 2025

University of Missouri - Advisor: Dr. Prasad Calyam

Columbia, MO

- Designed compute offloading system for multi-drone networks, optimizing across battery, latency, and cost tradeoffs using a distributed training framework
- Designed and tuned reward functions for multi-agent reinforcement learning agents, improving average episode reward by 28.6% over single-agent baseline and reducing deadline violations by 59% vs. cloud-only baselines
- First-author paper selected for oral presentation at IEEE IJCNN 2026 on multi-agent learning for agricultural drone systems

Incoming Software Development Engineer

August 2026 – November 2026

Amazon

Seattle, WA

PROJECTS

WhereToStargaze | *Python, React, Redis, NASA VIIRS, Google Places API*

November 2025

- Built stargazing location recommendation engine processing NASA satellite light pollution data
- Implemented Redis caching layer and optimized API calls for low-latency location scoring
- Won 1st place overall at TigerHacks 2025 (team of 4); deployed at wheretostargaze.us

Electron Microscopy Web Portal | *JavaScript, Python, Flask, React*

January 2024 – Present

- Built full-stack portal for SEM image upload, access, and management, with role-based access for research groups
- Deployed on University network; in active use by researchers in the Mizzou Electron Microscopy Core

ACTIVITIES AND LEADERSHIP

President | *University of Missouri Math Club*

August 2025 – Present

ML Project Lead | *Student Underwater Robotics Foundation*

September 2023 – Present

Treasurer | *Mizzou Quiz Bowl*

September 2023 – Present

TECHNICAL SKILLS

Languages: Python, C, Java, SQL, JavaScript, HTML/CSS

Libraries & Frameworks: PyTorch, TensorFlow, NumPy, pandas, Matplotlib, React, Flask, Node.js, ROS 2

Tools: Git, Docker, AWS (EC2, S3), Linux, Jupyter Lab, Google Colab
